

LIVE DEMO • LOCALHOST

Five calls. Three blocks. One QUOTE_LIE caught.

Demo agent calls 5 sellers via the firewall. Two pass. Three are blocked at the keypair, before any signature is produced. The signed-quote check is the centerpiece.

```

✓ ALLOW data-seller-a •
      $0.0050 • sig

✓ ALLOW data-seller-b •
      $0.0080 • sig
      52dfaJ2z...MxdZ1t
      verified

✗ BLOCK BUDGET_EXCEEDED
      Per-call cap is $0.0100
      USDC, requested
      $0.0500.
```

WHY CRYPTO • WHY THIS CAN'T BE

Pull out the keypair – both lock break.

01

Wallet IS the policy boundary.

Only an in-process proxy holding the signing key can refuse to sign. No SaaS layer upstream of the wallet can do this — the agent could just bypass it and sign directly.
